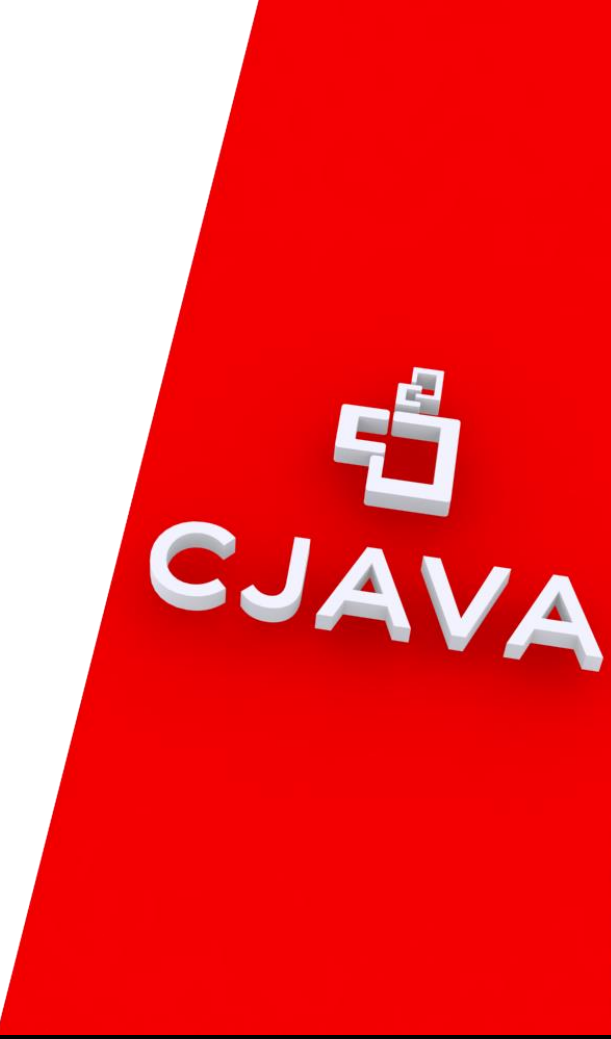
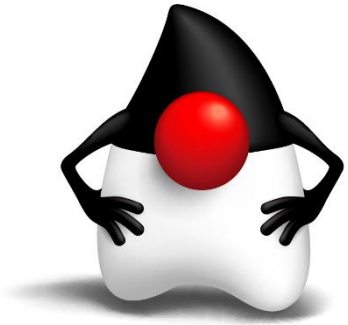
Java™

JavaFX: Java's new Rich Client Platform



Edwin Maraví
Technology Evangelist



CJAVA
siempre para apoyarte

Program Agenda

- Background
- Technical Details
- Roadmap
- JavaFX in Action (Demos)

Java Pioneered Rich Client Applications

- But developers had to learn multiple technologies

JavaFX Simplifies Application Development

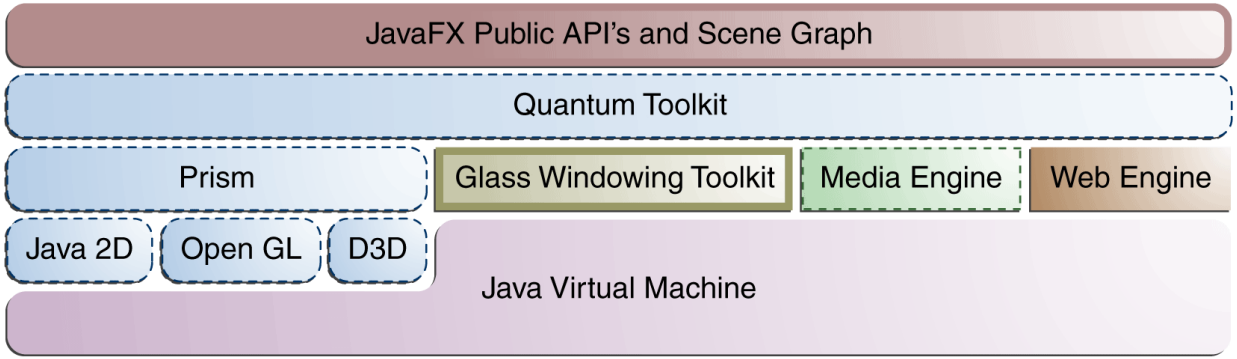
- Developers Focus on Capabilities Instead of Technologies

CJAVA
siempre para apoyarte

JavaFX is the Evolution of Java as a Rich Client Platform.

It is designed to provide a modern Java environment featuring a lightweight, hardware accelerated UI platform that meets tomorrow's needs.

JavaFX Runtime High Level Architecture



JavaFX Glossary

- **Glass Windowing Toolkit**: Provides native operating services, such as managing the windows, timers, and surfaces
- **Prism**: Graphics pipeline that can run on hardware and software renderers
- **Quantum Toolkit**: Ties Prism and Glass together and makes them available to the JavaFX APIs

JavaFX 2.0 Scoreboard

Released on time (October 2011)	✔
All functionality exposed through Java APIs	✔
JavaFX and JavaScript/HTML5 interoperability	✔
High performance 2D and 3D graphics engine	✔
Designed to exploit modern advances in desktop and mobile	✔
Make JavaFX UI Controls available open source	✔
Complete and integrated development lifecycle experience	❖

✔ Done ❖ In progress

Java APIs and FXML

Java APIs for JavaFX

- End-to-end Java development
- Java language features - generics, annotations, multi-threading
- Fluent API for UI construction
- Alternative JVM supported languages (e.g. Groovy, Scala) with JavaFX
- Leverage sophisticated Java IDEs, debuggers and profilers
- Java APIs preserve convenient JavaFX Script features (e.g., bind)

FXML

- Scriptable, XML-based markup language for defining UI
- Convenient alternative to developing UI programmatically in Java
- Easy to learn and intuitive for developers familiar with web technologies or other markup based UI technologies
- Powerful scripting feature allows embedding scripts within FXML. Any JVM scripting language can be used, including JavaScript, Groovy, and Scala

Graphics and Media

New Graphics Pipeline

- New hardware accelerated graphics pipeline (Prism)
- New windowing toolkit (Glass) for Prism
- Java2D software pipeline under Prism
- High-level support for making rich graphics simple
  - Shadows, Blurs, Reflections, Effects, 2D transforms
  - 3D Transforms today; Full 3D objects in future

Media

- Stable media framework based on GStreamer
- VP6, MP3 playback of Web multimedia content
- Low latency audio
- Alpha channel support
- Performance improvements
- Full screen video

WebView and Swing Interoperability

WebView Component

- Embed Web content in JavaFX applications
- HTML rendering based on Webkit
- Hardware accelerated rendering using PRISM
- DOM access and manipulation

Swing and SWT Interop

- Embed JavaFX content into existing Swing applications
- Extend existing Swing applications with new JavaFX features such as WebView and high-performance graphics
- Applies to SWT applications as well

Browser Plugin

- Faster loading of JavaFX Web applications based on Prism
- Pre-loader for improved user experience with JavaFX Web applications

CJAVA
siempre para apoyarte

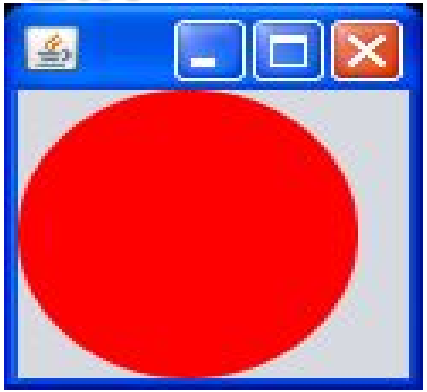
Open Source and Standardization

- JavaFX source code being contributed as part of OpenJFX http://openjdk.java.net/projects/openjfx/
  - Source code being contributed in phases
  - Initial phase: UI Controls
- Oracle is committed to standardize JavaFX through JCP
  - One or more JSRs will be submitted
  - Expected to be become part of the Java SE specification

Distribution and Support

- JavaFX Distribution
  - JavaFX Runtime can now be distributed with third party applications
  - Applies to JavaFX 2.0.2 and higher
- JavaFX Platform Commercial Support
  - JavaFX is now part of the Java SE technologies covered through Oracle Premier Support
  - Applies to JavaFX 2.0.2 and higher

Let's Compare: JavaFX 1.x



```
import javafx.application.*;
import javafx.scene.shape.*;
import javafx.scene.paint.*;

Stage {
  scene:Scene{
    Content:[
      Circle {
        centerX: 50
        centerY: 50
        radius: 50
        fill: Color.RED
      }
    ]
  }
}
```

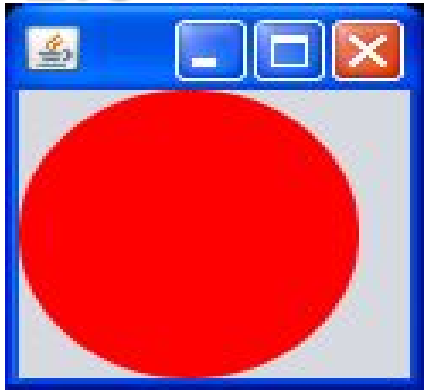
Let's Compare: JavaFX 2.0

```
public class JavaFXTest extends Application {
  @Override public void start(Stage stage) {
    Group root = new Group();
    Scene scene = new Scene(root,100,100);
    stage.setScene(scene);

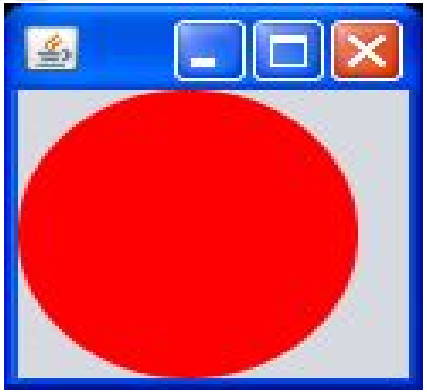
    Circle c1 =
      new Circle(50.0f, 50.0f, 50.0f, Color.RED);

    root.getChildren().add(c1);
    stage.setVisible(true);
  }

  public static void main(String a[]) {
    Launcher.launch(JavaFXTest.class, null);
  }
}
```



Let's Compare: FXML



```
<BorderPane>
  <center>
    <Circle radius="50" centerX="50" centerY="50"/>
  </center>
</BorderPane>
```

```
public class JavaFXTest extends Application {
  @Override public void start(Stage stage) {
    stage.setTitle("FXML Example");
    Parent root = FXMLLoader.load(getClass().getResource("example.fxml"),
        ResourceBundle.getBundle("r.fxml_example"));
    stage.setScene(new Scene(root));
    stage.show();

  }
}
```

CJAVA

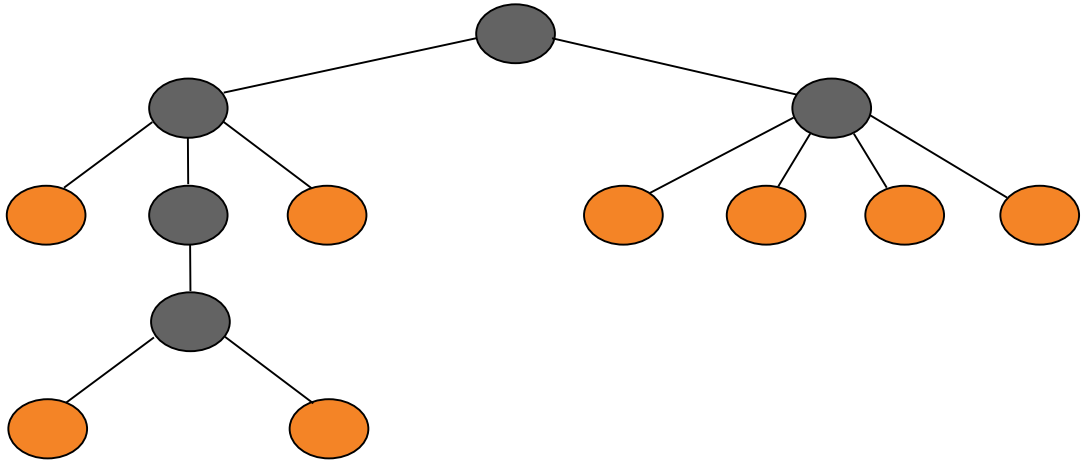
Scene Graph

- Directed Acyclic Graph
- Parents and children
- Representation of the GUI components



Media

- JavaFX supports both visual and audio media
- Cross-platform JavaFX media file format (fxm, mp3)
  - Platform specific formats supported via native players
- Media class represents a media file
- MediaPlayer provides control of the media rendering
- MediaView uses MediaPlayer to render media as Node
  - Many MediaViews can use the same MediaPlayer (cheaply)

Adding HTML Content

- The Embedded Browser

- WebEngine
  - Provides basic web page browsing functionality
  - Supports user interaction: navigating links, submitting forms
- WebView
  - Web page as a Node in scenegraph
    - Effects can be applied
  - Encapsulates WebEngine object
  - No plugin support

Effects...

GaussianBlur

InnerShadow

Reflection

SepiaTone

Transforms

```
Rectangle rect=new Rectangle(0,0,60,60);
rect.setFill(Color.DODGERBLUE);
rect.setArcWidth(10);
rect.setArcHeight(10);
```

```
rect.setRotate(45);
```

```
rect.setScaleX(2);
rect.setScaleY(0.5);
```

```
Shear shear = new Shear(0.7, 0);
rect.getTransforms().add(shear);
```

```
rect.setTranslateX(40);
rect.setTranslateY(10);
```

Binding

- Creates a dependency between a property and a changeable value
- High level API
  - Easy to use
  - Covers most common situations
- Low level API
  - Allows for more complex interactions
  - Optimised for fast execution and small footprint

Properties

- Basis for high level binding API
- Concrete types for all primitives, String and Object
  - **`DoubleProperty`**, **`StringProperty`**, etc
- Simple API
  - **`bind`** / **`unbind`**
  - **`bindBidirectional`** / **`unbindBidirectional`**
  - **`isBound`**

Simple Binding Example

```
private SimpleDoubleProperty topXProperty =
  new SimpleDoubleProperty();
private SimpleDoubleProperty topYProperty =
  new SimpleDoubleProperty();

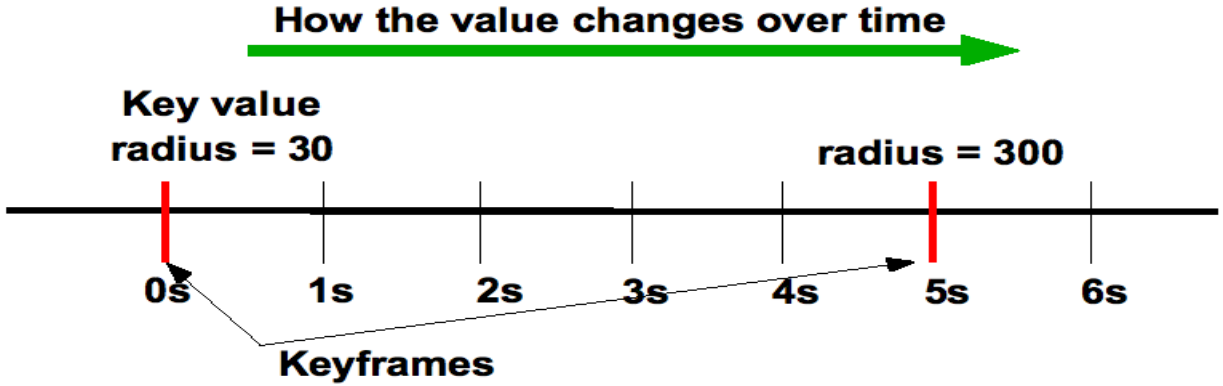
Line foldLine = new Line();
foldLine.setEndX(200);
foldLine.setEndY(200);
foldLine.startXProperty().bind(topXProperty);
foldLine.startYProperty().bind(topYProperty);

...

topXProperty.set(tx);
topYProperty.set(ty);
```

Timeline Based Animations

- **`Timeline`**
  - Modifies values of variables specified in KeyFrames
- **`KeyFrame`**: specifies that a variable should have
  - A particular value at a particular time
- **`KeyValue`**: Value to be interpolated for an interval



CJAVA
siempre para apoyarte

Animated Transitions

- Pre-defined, single-purpose animations
  - Fade, Path, Pause, Rotate, Scale, Translate
  - Can specify to, from and by values
- Container transitions
  - Parallel, sequential
  - Can be nested arbitarily
- Transitions and Timelines share ancestary
  - A Timeline can be added to a Parallel / Sequential transition

Standard Java Tools for Easy Development

- Source editor with improved syntactic highlighting, code completion, refactoring etc.
- Full debugger and profiler support
- Project wizard for easy creation of JavaFX applications

Other Java IDEs

- Source editor with syntactic highlighting, code completion, refactoring etc.
- Full debugger and Profiler support

JavaFX Scene Builder for Rapid UI Design

- WYSIWYG GUI design tool for the JavaFX platform
- Enables designing user interface screens by simply dragging and positioning GUI components from a palette onto a scene
- Generates files in FXML format that can be used within a project in any IDE such as NetBeans or Eclipse
- Can be used to create GUI for desktop and Web applications
- Currently in Early Access (by invitation)

JavaFX Future Directions

- Oracle's Next Generation Java Client Solution

- Tighter Integration with Java SE
- Migration Path for Java Client UI Technologies
- Optimized Web Services Support
- Advanced Tooling
- Support for Modern Device Interactions
- Delivering on the Cross Platform Promise

CJAVA
siempre para apoyarte

JavaFX is …

- Cross platform: Windows GA, Mac & Linux Dev. Preview
- Familiar: 100% Java APIs
- Powerful: leverages underlying Java platform
- Modern: CSS skinning, HW acceleration, Webkit
- Backwards ‘compatible’: Swing & SWT interoperability
- Flexible: applicable to embedded, tablets and mobile
- Open Source: http://openjdk.java.net/projects/openjfx
